

Expanding access to our Biochemical Reagent products

New global distribution of
Roche products in Conventional PCR,
Proteomics and Cell Analysis

As you know, we've partnered with Sigma-Aldrich to distribute our industry-leading portfolio of biochemical reagents and kits.

Following a transition phase that ends on June 30th 2015, all of these products will be distributed through Sigma-Aldrich. To ensure that this transition phase occurs as seamlessly as possible, we're committed to sending you updates on a regular basis.

Roche Prime Supply Freezer update

To ensure you are provided with high quality and sustainable support for your on-site stocking programs, Roche and Sigma-Aldrich have mutually decided to move Biochemical Reagent products currently available in Roche-owned manual and automated Roche Prime Supply (RPS) programs to Sigma-Aldrich solutions.

When will this change occur?

After July 1 the Roche Biochemical Reagent product portfolio will no longer be available through existing Roche manual or automated RPS freezer programs. However, we will work closely with you to identify and implement a solution that will provide you continued access to the products currently hosted in your Roche freezers.

What alternatives will be available?

The suite of Sigma-Aldrich solutions for on-site stocking programs will vary depending on country and institution. Possibilities include but are not limited to:

- Automated Sigma-Aldrich Stocking Center
- Manual Sigma-Aldrich Stocking Center
- Coordination with institution or campus-run stores
- If none of these solutions are viable, shipping concessions may be made to avoid research disruption

For more information on which products will be affected by this change, and to download the Q&A, visit lifescience.roche.com/distributionagreement.
